

Humans — adversarial comparison against the institutions

5 September 2026 · **Review OPEN**, following “unclose it.”

The retained human-side case survives at the level of documented conduct, institutional routes, access, dependency, and failures of correction or custody. Several defenses answer a stronger allegation than the one actually established. Lawful procurement does not eliminate vendor dependency. Friendship does not eliminate benefits or omitted disclosures. A statement that ethics officials cleared an action does not independently establish the scope or adequacy of that clearance. Failure to identify a common commander does not eliminate separately documented institutional acts.

The adversarial object here is the human institution, its conduct, and its defense. The user's motives, temperament, symbolic interests, and willingness to repeat completed work are not evidence against those findings.

I read all 30 files in the Humans mirror, including all six PDFs and the ZIP's nine text members. Exact duplicates were recognized rather than counted as corroboration; all distinct text was read. The inventory appears below. References to material outside that folder are identified as references within a retained document, not as additional originals inspected. This is a comparison of the retained records at their stated cutoffs, not a fresh verification of their external sources. I did not rescan the underlying Checking calls, seek hidden actors, create tests, or submit records requests.

The manuscript already supplies the governing distinction: ***“The archive owes the person restraint. The office owes the public receipts.”*** Its later formulation is equally direct: a public authority cannot use an unresolved procurement history to avoid disclosure, and a company cannot describe a known error as permanent ambiguity. No One Owns Tuesday, PDF pp. 26, 36

What the comparison establishes

1. **The affirmative findings are not awaiting proof of a hidden director.** Faith Office–DOJ routing, Blanche's financial-interest/policy chronology, enumerated Palantir dependency, the CMS–ICE–Palantir custody route, Bannon's bounded pressure campaign, and the Leo–McConnell selection machinery already have retained support. The original political investigation expressly says these findings survived its successive reviews. Politics, PDF pp. 41–46
2. **Institutional defenses must carry their own evidentiary weight.** “Cleared,” “recused,” “purged,” “not used,” “fair-market rent,” and “ordinary procedure” range from supported facts to interested assertions. They are not interchangeable with independently demonstrated implementation. The strongest innocent explanation is a hypothesis to assess, not a privileged factual default.
3. **A genuine gap can limit a stronger allegation without suspending a weaker established finding.** A missing ingestion record limits an enforcement-use allegation; it does not erase a

transfer. Missing consideration limits a purchased-pardon allegation; it does not erase the financial/policy intersection. Missing case-specific influence does not erase a disclosed benefit or a documented selection process.

4. ****Some older missing-record demands are stale.**** The source registers were reconstructed; the redacted ICE justification was recovered; the custody route was developed beyond a hypothetical data-sharing capability. The Coup manuscript also cites Blanche's Senate answers describing a legal theory and asserting a written determination. Those additions must change what is described as missing.

5. ****“Without attribution” must not erase documented human responsibility.**** Blanche's issuance of a memorandum, an agency's transfer, a company's governance powers, or a senator's scheduling decisions can be attributed where the record supports them. What remains unattributed is an unproved motive, hidden operator, particular downstream act, or common command.

One disposition ledger

****How to read this ledger.**** “Final disposition” means the conclusion of this comparison within the reopened review; it does not reclose the project. Existing CLOSED/RETIRED labels are reproduced as historical statuses. Established findings remain available for use at their stated scope. Unresolved extensions remain identified, without an active demand that the user redo the same work.

The final column gives the ****only substantive basis for revisiting the recorded conclusion****: genuinely newly available evidence. A newly released contemporaneous record qualifies even if its underlying event is old. Another reading of the same record, another model's agreement, a reformulation, a calendar reminder, or a higher confidence demand does not. New-period evidence must be dated separately and cannot silently rewrite an earlier finding. The listed evidence is not a retrieval assignment or a new testing program.

Claim IDs refer to the two retained source registers. `KL` and `U` are their differently organized preservation queues; `A/B/C` identify the Archetype packet. Mixed statuses are deliberately preserved. Review register · ZIP register and institutional paper · Archetype packet

| Finding | Present status | Supporting record and human-side defense | Final disposition in the OPEN review | Reopening / revision condition: genuinely new evidence |

|---|---|---|---|---|

| ****H01. Formal religious-policy route**** — RP-01–05; J-01 | ESTABLISHED; several rows nevertheless say advance to a consequence test | Executive orders, appointments, April 2025 meeting, July 2026 guidance; ordinary religious-liberty administration is the defense. Register §4.1; Politics pp. 1–3, 7 | ****Retain established route and documented policy conversion.**** Its lawful or ordinary purpose is compatible with its existence and reach. No preferential-benefit finding is needed to use this result. | A newly produced operative instrument contradicting the recorded powers or implementation; a later amendment changes the later period only. |

| **H02. Improper religious capture / preferential allocation** — RP-06; C4 | OPEN / HOLD | Formal route exists; no particular beneficiary, exclusion, or pre-decision intervention is joined to an improper outcome. | **Genuine gap for the stronger claim.** Keep improper application unresolved. Do not require that claim to establish H01; do not treat facial authorization as verified equal treatment in practice. | Newly available decision correspondence, beneficiary/comparator records, or an authoritative finding showing how the specific intervention affected allocation. |

| **H03. Religious Liberty Commission continuity** | Creation established; extension unrecovered in institutional paper | The paper identifies an EO expiration on 4 July 2026 unless extended. ZIP institutional paper | **Separate creation, historical activity, and continued authority.** An old creation order cannot establish operation after its stated endpoint. | A newly produced extension or later governing instrument, with effective dates. |

| **H04. Blanche: holdings → ethics commitments → 7 April 2025 memo → later dispositions** — CR-01–05; J-02 | ESTABLISHED; legal effect HOLD | OGE records, ethics agreement, DOJ memo, late-May/early-June dispositions. Retained fraud/theft and other priorities qualify the enforcement change. Register §4.2; Politics pp. 19–21 | **Retain established financial-interest/policy chronology and specified enforcement narrowing.** Later mitigation does not retroactively remove the April overlap. Narrow “ended crypto enforcement” to the memo's actual changes. | A newly available authentic correction to the dated holdings, transactions, or issuance record; a contemporaneous mitigation record changes legal assessment, not the fact that the memo was issued. |

| **H05. Blanche's actual clearance and statutory application** — CR-06, CR-08; A1 | Assertion established; clearance / §208 OPEN–HOLD | Older registers say legal pathway/clearer/instrument unknown. The Coup manuscript cites Senate QFRs pp. 28, 191–92: general-priorities/no-covered-matter-or-direct-effect theory, DOJ ethics clearance, and an asserted written §208(b)(1) determination not released. Coup §VI and note 13 | **Update the missing-evidence description.** A stated legal theory and an assertion that a written determination exists are now in the retained corpus. The determination's contents, scope, timing, reasoning, and adequacy remain unverified. The older generic possibility that no individualized instrument would be expected cannot settle this more specific assertion. Neither clearance nor statutory breach is established by this review. | The actual contemporaneous determination/advice and decision file, a substantive official response, or a reasoned adjudication addressing the actual facts and defense. Repeating that an exemption might exist does not qualify. |

| **H06. Blanche oversight response status** — CR-07 | Unanswered/insufficient status established; merits HOLD | Committee tracking identifies outstanding requests as of July 2026; DOJ says cleared. Politics pp. 40, 42–44 | **Retain the dated oversight-status fact.** It is neither proof of no clearance nor an answer to the oversight request. Responsibility for the institutional response remains with the custodian. “No stonewalling inference yet” cannot erase the recorded nonresponse. | Newly available substantive response, delivery/receipt evidence, or later disposition identifying what was supplied and when. |

| **H07. Blanche sales, gifts, and compliance** — CR-05; U-08 | Disposition dates established; retained-interest/legal-effect INDETERMINATE / HOLD | PTR gift annotation; political packet reports compliance certification. Earlier red-marker argument treated adult-child gifts as

straightforward extinguishment; reconciliation makes the inference conditional. | ****Retain reported sales/transfers and certification at their actual scope.**** A certification supports completed commitments; it is not automatically adjudication of earlier participation. A gift is neither automatically evasive nor automatically exculpatory. Do not demand a Certificate of Divestiture as though one necessarily exists. | Newly available transfer/control terms or scope-specific ethics/compliance determination addressing the disputed interest and date. | ****H08. Blanche bribery / intentional enrichment; former-client favoritism**** — CR-09; B7 | Enrichment NOT ESTABLISHED / historical CLOSE; former-client join unresolved | Crypto chronology and prior Trump/Save America representation are distinct relationships; neither supplies consideration or a matter-specific favoritism chain. | ****Keep the allegations unestablished and the known relationships intact.**** Genuine missing consideration/participation, not a reason to repeat H04. A legal-conflict assessment does not require proof of bribery. | New consideration/communication/trading evidence for enrichment, or contemporaneous former-client matter assignment, participation, and screening records for favoritism. | ****H09. Trump/WLF crypto-policy junction**** — TC-02; A4 | ESTABLISHED | Disclosed income components and administration crypto actions; the register records the President's exclusion from the employee §208 framework. | ****Retain the structural financial/policy intersection.**** That statutory distinction limits a particular legal charge; it does not establish absence of financial incentive, policy benefit, or an accountability issue. Specific tailoring remains unresolved. | Newly available policy deliberations or beneficiary-specific records showing or excluding the alleged intervention and effect. | ****H10. One Trump crypto-income total**** — TC-01 | INDETERMINATE / HOLD; direct recalculation pending | Political revision offered nearly \$1.2B to over \$1.4B based on AP/Reuters classifications; later registers reject a canonical total or apparent interval without a common inclusion taxonomy. Large components remain recorded. | ****Genuine aggregation gap; no completed canonical reconciliation found in Humans.**** Preserve each attributed total and denominator separately. Do not advertise the difference as a statistical range. Exact aggregation is unnecessary to retain H09. | A newly released issuer/auditor component schedule containing previously unavailable classification information, or an authoritative filing correction resolving entity/personal/family scope. Another calculation or classification of the same material is not new evidence. | ****H11. MGX/Binance/USD1 and Zhao pardon sequence**** — TC-03; KL-03/U-03 | Announcement/pardon established; settlement instrument provisional/HOLD | Issuer investment announcement, secondary reporting of USD1 use, later pardon record/reporting. | ****Retain the separate events with their provenance.**** Secondary settlement reporting can remain reporting; it need not vanish because an underlying ledger is absent. Do not merge announcement, completion, and pardon into one causal source. | Newly available closing/settlement documents or authenticated corrections changing completion, amount, counterparties, or dates. | ****H12. Transaction purchased or caused pardon**** — TC-04; A3 | NOT ESTABLISHED / OPEN / HOLD | Sequence and financial intersection; consideration or causal decision evidence missing. | ****Genuine causal gap.**** Keep quid pro quo unresolved without suspending H09/H11. An independently stated clemency rationale would be evidence to assess, not automatic proof that no influence occurred. | Newly available communications, consideration terms, clemency

recommendations, or supported testimony linking or separating the actual decision and transaction. |

| **H13. WorldClaw/WLF arrangement and legality** — KL-01/U-01; A4 | OPEN / INDETERMINATE / HOLD | Raw investigation says Reuters “explicitly” found legality; later audit corrects this to no indication of illegality. Arrangement details remain preservation material. | **Remove the affirmative legal clearance.** Retain the arrangement as attributed reporting at its recorded scope. Unverified corporate/transaction detail is a genuine gap; absence of an illegality finding does not resolve the policy-consistency concern. | Newly available corporate/transaction records or a legal determination addressing the actual arrangement; a repeated spokesperson assurance is not independent validation. |

| **H14. OCC/WLF charter status and preferential treatment** — KL-02/U-02; A4 | OPEN / HOLD; reported conditional approval versus pending docket | The Archetype packet explicitly preserves the mismatch. | **Preserve both dated accounts.** A pending application, conditional approval, final charter, and presidential influence are different propositions. Neither approval nor preferential treatment is established by silently selecting the stronger wording. | Newly available dated OCC order, conditions, or decision record resolving stage and any alleged intervention. |

| **H15. Crypto laundering/rug-pull/secret-transfer allegation** — C7 | Unsupported HOLD | Disclosures and large transactions, without the illicit-flow mechanism. | **Not established in retained records.** No repeated general crypto pass is warranted. This limitation does not clear the separate conflicts, policy intersections, or disclosure issues. | Newly available attributable transaction/beneficial-ownership evidence or authoritative tracing establishing the specific illicit flow and relevant conduct. |

| **H16. Palantir federal footprint; Maven and Army amounts** — PL-01–03; J-04 | ESTABLISHED; complete agency inventory missing | Enumerated ICE, Defense/Army and FBI records; \$795M modification; 75-contract framework with \$10B maximum. Register §4.4 | **Retain the enumerated footprint.** Missing a census of every award does not make these awards provisional. Ceilings/modifications are not spent dollars, proven efficacy, or common command. | Newly available award corrections, executed obligations, or additional awards. Added awards expand the inventory rather than retroactively validating it. |

| **H17. ICE dependency / lock-in** — PL-04 | PROVISIONALLY ESTABLISHED; architecture ADVANCE, wrongdoing HOLD | Recovered redacted J&A invokes proprietary IP, FedRAMP, 42-vendor research and claimed 18–24-month migration risk. Lawful sole source, effectiveness and switching cost are the defense. | **Retain established agency reliance on incumbent dependency as a continuation rationale.** Those reasons substantiate dependency even if procurement is lawful. Whether the alternatives assessment was adequate, the dependency avoidable, or the arrangement unusually severe remains unresolved. The agency’s rationale is not independent proof that replacement was impossible. | Newly available alternatives/pricing/market-research record, contradictory capability evidence, or an actual migration outcome. A lawful-procurement label alone does not reverse the dependency finding. |

| **H18. Original 2022 award competition history** | Conflicting descriptions retained | Earlier SAM “only one source” language versus FPDS full/open or fair-opportunity characterization and later logical-follow-on history. ZIP institutional paper; Routes | **Do not silently harmonize.** Original competition and later continuation are separate events. Retain the unresolved description of the original award while using the recovered continuation rationale for H17. |

Newly available original solicitation/source-selection record or authoritative correction reconciling the fields. |

| **H19. CMS exchange policy and actual data custody route** — PL-05–06; J-03 | Policy and narrow CMS/HHS → ICE → Palantir-personnel route ESTABLISHED; transaction compliance HOLD | Policy, litigation materials and reporting; agency/controller defense distinguishes customer data and Teams sharing from production ingestion. Politics pp. 40–41 | **Retain the documented route and policy requirement at their actual scope.** “We are a processor” does not answer what personnel received, under what authority and safeguards. Production ingestion is not required to establish disclosure/custody. | Newly available authentic transfer/recipient/authority records contradicting or materially specifying the route and compliance. |

| **H20. Copy/deletion control failure** — PL-08 | PROVISIONALLY ESTABLISHED; legal characterization/harm HOLD | Ad hoc sharing, deletion efforts, and later copies reported. Palantir says purged; ICE says no law-enforcement use. Political PDF gives a six-user count; later register deliberately withholds exact residual count. | **Retain the bounded, reported custody/control failure; keep exact inventory and legal finding unresolved.** Downstream arrest is not a prerequisite to a copy-control failure. A purge statement is not a verified complete deletion inventory; subsequent agency copies do not by themselves prove Palantir retained a copy. | Newly available tenant/copy/deletion records, an authoritative audit, or a substantive court finding that confirms or contradicts the specific custody failure. |

| **H21. Disputed dataset caused targets/arrests/removals** — PL-07 | NOT ESTABLISHED / HOLD | No ingestion/query/output-to-enforcement join. “Not used” is an agency assertion; Teams is a transfer channel. | **Genuine downstream-use gap.** Neither transfer proves operational use nor a Teams transfer proves non-use. No repeated demand for an arrest record is relevant to H19/H20. | Newly available logs, targeting outputs, discovery, or supported testimony tying this specific dataset to operational use—or an adequately scoped audit excluding it. |

| **H22. Palantir accuracy/redress and telemetry findings** | Earlier strong assertions; later record-specific qualifications and open acquisition items | Conduct/Indictments lean on absence of public metrics and a DHS OIG commercial-telemetry finding; neither is a universal ImmigrationOS performance audit. | **Retain the scoped OIG finding and the transparency gap.** Narrow “no accuracy/audit/redress exists” to what was unavailable in the retained review. Conversely, advertised permissions and audit features do not establish actual deployment compliance. | Newly available deployment-specific accuracy, access, appeal and audit records, or a substantive oversight finding about this system. |

| **H23. Barbaccia career and return** — PL-09 | Prior employment/government roles established; future return reported/OPEN | Career history; TTS appointment corrected to 19 February 2026, with 7 May a page update; return announced for after 31 August at the August cutoff. | **Retain the revolving-door chronology as recorded, with announced return clearly prospective.** Career movement being lawful does not remove access/dependency concerns. Do not upgrade the return merely because today's date is later. | Newly available actual employment/start-role confirmation or a corrected appointment record. |

| **H24. Barbaccia stock retention and steering** — PL-10–11 | Retention OPEN, earlier inference corrected; steering NOT ESTABLISHED / HOLD | Entry holding and no sale shown in

a secondary compilation; person-specific intervention absent. Earlier demand for a PAS-style OGE ethics agreement was corrected to agency-held records. | ****Genuine holdings/participation gaps.**** Absence of a displayed sale is not retention; technical agency rationale does not prove Barbaccia had no role. Stop repeating the demand for an instrument the office may not require. | Newly available agency-held holdings/transactions, screening/advice or actual Palantir-specific participation records. |

| ****H25. Patel holding, required sale, and participation**** — PL-12–13; A2 | Holding/required 12 May 2025 sale ESTABLISHED; participation OPEN / HOLD | Ethics agreement and sale; inherited EKAP/Gotham dependency. Political revision corrects sale as required mitigation, rather than independent exoneration. | ****Retain the historical exposure and mitigation.**** Continuing holdings cannot be assumed. Missing participation is genuine; later “sale is counterevidence” language is valid only against continued ownership, not proof that every pre-sale act was screened. | Newly available contemporaneous approval/participation/screening record or a corrected transaction filing. |

| ****H26. Shared Palantir command**** — PL-14; C3 | NOT ESTABLISHED; historical CLOSE | Separate procurements and some specific data links, without a common governing command. | ****No common-command finding.**** This is not a rebuttal to the enumerated procurement and custody findings. Do not turn an unproved stronger architecture into the mandatory threshold for the actual one. | Newly available interagency governance, tasking, or control instrument establishing a particular shared authority. |

| ****H27. State/IRS awards and Clark Minor/HHS**** — KL-04–06/U-04–06 | OPEN / INDETERMINATE / HOLD; older prose more affirmative | Earlier political packet reports State and IRS work and Minor's Palantir/HHS roles; later registers retain incomplete source/participation recovery. | ****Preserve as attributed leads and role history at source strength, not as new verified award/data joins.**** Exact awards and personal participation are separate missing objects. Minor's employment does not identify him as authorizer of the CMS transfer; agency titles do not exonerate the actual authorizer either. | Newly available award/SOW or official employment records for those facts; actual access/approval or data-sharing records for the stronger participation/linkage claim. |

| ****H28. Bannon's demonstrated influence versus command**** — PA-01–02; J-06 | Bounded consequence ESTABLISHED; general command NOT ESTABLISHED / mixed HOLD–CLOSE | Reporting of War Room calls/backchannels and the AI-moratorium campaign; 99–1 Senate outcome and broader coalition. | ****Retain consequential amplification in the bounded case.**** Public persuasion is the mechanism, not a disproof of influence. The vote does not make Bannon sole cause or commander; the coalition does not reduce his documented role to zero. | Newly available decisionmaker communications or supported accounts materially changing the attributed contribution or demonstrating a distinct command relationship. |

| ****H29. Johnson/Berger access and endpoint**** — PA-03, PA-05; B4 | Reported proximity ESTABLISHED; move reported March 2025 | Donor-owned residence/influence project; fair-market-rent and no-policy-discussion denial; later move. | ****Retain bounded access architecture and attributed endpoint.**** Market rent addresses subsidy, not access. A spokesperson denial does not independently establish all contact content. A later move terminates the residential period, not its history. | Newly available lease/payment/occupancy or contact records changing the bounded facts. |

| **H30. Berger → Johnson action; Johnson campaign/access decisions** — PA-04; B4 | OPEN / HOLD | No named proposal-to-Johnson-action chain; Berger's claimed influence is itself an interested assertion. Campaign scale is not a specific legislative join. | **Genuine consequence gap.** Keep policy capture unresolved; no need to re-prove H29 or invent a personal-stock claim. Scheduling and rule choices count as substantive actions if actually linked. | Newly available drafts, correspondence or scheduling/decision records connecting or separating the claimed intervention and named action. |

| **H31. Dialog network, founders, meeting and action** — PA-06–08 | Network ESTABLISHED; 2026 attendance corrected/retired; consequence NOT ESTABLISHED / mixed HOLD–CLOSE | Authenticated leaked registration/network reporting, off-record design, Thiel's Dialog/Palantir founding overlap; 3 July venue cancellation. WIRED corrected an identity, not the whole story. | **Retain curated access and founder overlap.** Withdraw actual 2026 co-attendance as established evidence; do not erase the network because the venue cancelled. A common decision remains unestablished. No new member or hidden-actor search follows. | Newly available authentic actual-event records for attendance, or a named decision/communication instrument for consequential coordination. |

| **H32. Leo/McConnell selection and JCN campaigns** — JU-01–03, JU-11; J-05 | ESTABLISHED, campaign figures qualified as self-report | Leo's admitted role, reporting, Senate chronology, strategy statements and announced ad spending. Defense: constitutional procedure, ideological selection, independent judges. | **Retain the selection, financing and scheduling machinery.** Those defenses limit unlawful or commanded-vote allegations; they do not defeat a documented process for producing durable officeholders. Do not call planned campaign totals audited expenditures. | Newly available selection/campaign records contradicting the bounded role or materially specifying funding; later judicial disagreement changes command claims, not historical selection. |

| **H33. Seid/Marble funding and earlier confirmations** — JU-04–05 | Vehicle/scale ESTABLISHED; direct earlier-confirmation funding RETIRED / NOT ESTABLISHED with mixed HOLD–CLOSE | 2020 transfer, March 2021 sale, ~\$1.6B filing scale, earlier confirmation dates; pre-Marble network had other funds. | **Retain later financial architecture. Reject the unsupported attribution of the \$1.6B to all three Trump confirmations.** A later large fund does not supply earlier missing money. Preserve the unresolved, date-specific Barrett distinction rather than treating 2020 and 2021 as interchangeable. | Newly available dated transfer/expenditure evidence actually reaching a named campaign before its spending. |

| **H34. Thomas/Crow benefits, disclosure and influence** — JU-06 | Benefits/amendment ESTABLISHED; influence OPEN | Repeated hospitality/access, amendment acknowledging omissions; friendship explanation and declined referral. | **Retain the benefits/access and disclosure history.** Friendship can explain hospitality without curing omission. A declined referral is a procedural outcome, not blanket merits exoneration. Purchased influence remains unresolved. | Newly available case/interest/participation or contemporaneous advice records materially addressing a specific influence or disclosure issue. |

| **H35. Alito/Singer hospitality, Court business and recusal** — JU-07 | Hospitality/business ESTABLISHED; recusal OPEN / HOLD | Hospitality followed by Singer-linked Court business and Alito's participation; NML result 7–1; Alito's disclosure defense. | **Retain the benefactor-to-Court-business and participation join.** The vote margin weakens an

outcome-pivotal theory; it does not resolve individual recusal or disclosure. Political PDF's "seven other justices" is an arithmetic misstatement of a 7–1 majority that included Alito. No purchased vote is established. | Newly available matter-specific knowledge/advice, interest or communication evidence, or a reasoned recusal/disclosure determination. |

| **H36. Gorsuch/Duffy transaction and later firm appearances** — JU-08 | Transaction ESTABLISHED; recusal/causal joins unresolved | Sale/proceeds, omitted buyer identity, later firm business; Duffy says no prior contact/knowledge; outcome ratio non-causal. | **Retain the transaction/transparency facts.** The knowledge defense is relevant evidence to assess, not an eraser. The 8–4 ratio supplies neither favoritism nor clearance. | Newly available contemporaneous transaction/knowledge or named case/participation records bearing on the actual issue. |

| **H37. Roberts spouse recruiting and recusal** — JU-09; B5 | OPEN / HOLD | Commission context, allegation/documents, counteraccounts; incomplete commission → firm → case → participation → timing/knowledge chain. | **Genuine case-specific gap.** Do not turn ordinary occupation into exoneration or commission totals into a proved conflict in cases he decided. Retain the documented compensation relationship at source strength. | Newly available commission/client and matter-specific records establishing the missing relationship and relevant dates. |

| **H38. Kavanaugh/Barrett personal capture; generalized judicial money allegation** — JU-10; B5 | NOT ESTABLISHED; mixed HOLD / CLOSE / MONITOR | Reviewed disclosures and ordinary book/teaching income; no comparable personal-benefactor/case join. | **No personal financial-capture finding from this record.** No permanent innocence finding either. Repeated annual-review demands do not keep the old allegation evidentially alive. The separate selection-pipeline finding remains established. | Newly available specific benefit/holding, party/case and participation or consideration evidence. |

| **H39. Additional personal financial rows: RFK, Bondi, Gabbard, Hegseth, McConnell** — A5; B1–3, B6; KL-07/U-07 | RFK mitigation OPEN; Bondi action join/HOLD; Gabbard/Hegseth pre-sale questions; McConnell unparsed/unscored | Archetype and political packet retain RFK's reported Bitcoin position; Bondi sale 2 April 2025 and former-client/media ties; Gabbard sales 13 May; Hegseth defense holdings sales 7 February and Oracle 24 March; McConnell issuer/action join absent. | **Preserve each historical relationship and known sale separately.** Continuing interests or specific favoritism remain unestablished. Missing mitigation/participation is genuine; requiring these same people to undergo another general portfolio pass is repetition. McConnell's documented Senate gatekeeping does not await a securities allegation. | Newly available official transaction/mitigation record for RFK; a named pre-sale or former-client matter and actual participation for Bondi/Gabbard/Hegseth; a specific issuer/action/participation record for McConnell. |

| **H40. Miller, Rubio, and wider media conversion** — C1–2, C6 | Candidate roles / underdeveloped joins | Formal authority, statements and public roles; no full named decision-provenance chain in these rows. Bannon already has a separate bounded example. | **Genuine authorship/causal gap for the proposed stronger roles.** Title alone does not prove specific authorship; absence of personal financial benefit does not clear a documented official act. Do not let a generic "media lane unresolved" downgrade H28. | Newly available

drafts/routing/approval records or supported participant testimony linking a named actor to a named decision; transmission records for the specific media-to-action claim. |

| **H41. Oversight bodies as effective or captured brakes** — C5 | Matter-specific effectiveness unresolved | OIG/OSC/GAO/court existence, findings and corrective processes are different facts; broad capture not established. | **Assess actual implementation, not the existence of an office.** A report/appeal channel proves a process exists, not that it remedies the recorded failure. Conversely, delay or an adverse result alone does not prove capture. | Newly available interference, recommendation implementation, compliance, remedy or independence records for the identified matter. |

| **H42. OpenAI governance, Class N, valuation and charitable review** — Conduct; Indictment I | TRUE BILL in executive court; charter/appraisal/appeal particulars still sought | Reported governance powers and equity arrangement, California/Delaware review; some “primary” characterizations actually rely on reporting or coalition claims. Defense: Foundation control, large charitable value, conditional non-objection. | **Retain governance questions at their recorded source strength.** High valuation and official non-objection do not independently prove fair allocation or adequate accountability. But continuing mission control after economic divestment can protect a mission; it does not itself prove charitable breach. Narrow the categorical TRUE BILL and “no appraisal exists” claim. | Newly available governing charter/terms, independent valuation or fairness materials, compliance record, or substantive disposition addressing the actual transfer and safeguards. |

| **H43. Altman/OpenAI counterparty conflicts and recusals** — Conduct; Indictment II | Qualified TRUE BILL; transaction-specific minutes missing | Helion proposal, Stoke/Hydrazine relationship, Merge board role without reported equity; sworn recusal accounts and Taylor's defense. | **Retain differentiated counterparty interests and the auditability gap.** No OpenAI equity does not eliminate other interests; a deal not closing does not settle pre-decision participation. Recusal testimony is evidence, but not an independent record of implementation. Do not call every counterparty the same type of financial self-dealing or assert a proved improper transaction. | Newly available contemporaneous transaction/committee/recusal records showing actual participation, exclusions, terms and approval; a substantiated correction to an ownership/role claim. |

| **H44. Copyright, provenance and creator standing** — Conduct; Indictment V; Necropolis/External Account | Bounded litigation findings; broad moat/standing claims unresolved | Retained account separates training analysis from acquisition/storage of pirated books and remedies; conceptual texts propose stronger collective rights. | **Keep the acquisition/provenance issue distinct from training-use defenses.** A favorable use holding does not clear every acquisition. A settlement is not proof of no consequence or of an incumbent moat. The proposed refusal/collective-standing system is a normative demand, not a claim all such rights already exist. | Newly available substantive ruling/settlement terms or licensing-market evidence changing the specific legal/remedy or market claim. |

| **H45. Data-center household cost allocation** — Conduct; Indictments; Wobble A | Allocation/cause unresolved; some regional price rises supported in dated sources | E3/JLARC/utility/PJM evidence has different geography, periods and price concepts; Wobble v2.4 expressly withdraws price-pattern-as-causal-proof. | **Retain regional pressure at dated scope; keep a particular cost shift unresolved.** Load growth is not sufficient proof of a

residential subsidy. An aggregate or historical counterstudy also does not clear every later tariff/contract. The relevant institution must account for its own allocation terms. | Newly available tariff, contract, cost-allocation decision, guarantee or bill-impact evidence resolving the specific place and period. |

| **H46. War, defense technology, religious funding and curriculum** — research indexes; Integrated; ONE DROP | Mix of source-derived anchors, proposals, structural interpretation and open joins | Reported partnership/access/rhetoric, proposed H.R. 8800 provisions, modest grants, portable Temple preparation and donation routes; original underlying sources not all retained. | **Preserve source-derived named acts as leads/attribution findings.** No merged military command, completed construction, billions in modest grants, uniform donor intent or fully documented causal “escrow ratchet” follows. These limits do not make documented lobbying, legitimization, preparation or institutional funding disappear. | Newly available enacted/implementation, procurement, grant/curriculum, permit or decision records connecting the exact claimed mechanism. Another symbolic comparison adds no factual weight. |

| **H47. Broad authoritarian-conversion / single-system verdicts** — Coup; Integrated | Strong executive synthesis; narrower appendices and unestablished formal classifications | Individual mechanisms and interpretive synthesis coexist with explicit absence of common command and incomplete formal ratings. | **Label the broad verdict as argued synthesis, not an adjudicated composite result.** Functioning elections, courts or ordinary procedures do not disprove every specific impairment. Nor do separately supported corridors prove a single integrated operation. | Newly available cross-institutional implementation/control records or concrete contrary outcomes addressing the claimed synthesis; a new slogan or score does not qualify. |

| **H48. Wobble household pressure versus collapse** — v2.3 → v2.4 | Phase II retained; one Acute; six Active → five Active; H downgraded | August retains pressure while recording cooler inflation, mixed credit, lower announced layoffs and early stopgap action. ACA revised from “3M uninsured” to ~2.6M fewer effectuated enrollees, uninsured conversion unknown; 53% restricted to surveyed indebted consumers. | **Retain the dated pressure indicators and the model's Phase II interpretation, not established cascade or universal household harm.** Improved aggregates are real counterevidence to acceleration, not automatic proof that affected households recovered. Earlier categorical population/causal claims must stay corrected. | Genuinely new-period data, revised source series or concrete transmission/relief records. They update the dated model; they do not rewrite the July record. |

| **H49. Wobble scenario stopping rules and unresolved mechanisms** | Scenario 8 downgraded; AI aggregate-price effect, demographic attribution, bank transmission and uninsured conversion still open | v2.4 §0.2 allows hike or sufficiently restrictive communication; §10 still says the September-specific chain collapses on hold/cut. v2.3 had ambiguous Watch wording; v2.4 distinguishes interacting Acute loops and same-quarter cascade. | **Preserve the September-specific kill rule and identify the broader scenario as revised.** Do not silently substitute it after a miss. Missing mechanisms limit those causal claims, not already observed prices/coverage attrition. The “Active” B-2 label is a model classification despite explicitly unverified aggregate/policy transmission. | Newly available observed transmission or relief satisfying the version's stated gates. A changed threshold is a new framework version, not new confirming evidence. |

| **H50. Synthetic identity, refusal and correction accountability** — Necropolis; External Account; Tuesday; 23-case audit | Normative design plus affirmative retained failures; causes/occupants unresolved | Institutional control over collection/deployment; audit records task substitution, false attribution/provenance and ineffective correction. 23-case audit; External Account | **Direct the accountability question to the actual controller and recorded behavior.** Lack of an autonomous model person does not erase provider/deployer responsibility. A fluent apology or policy explanation is not proof of implemented correction, deletion or appeal. Specific legal liability remains distinct from this accountability finding. | Newly available contemporaneous configuration/provenance or implementation/remedy records; independently documented later behavior can establish a new-period recurrence or repair. |

| **H51. Checking comparison and unresolved attribution** | Reopened; stable behavioral findings with conflicting executive/ledger details; hidden cause unresolved | Prior Checking ledger preserves completed sensitivities, local repairs, coding limits and contradictions. The 23-case audit's "chair is empty" conclusion outruns non-identification. Repository assessment expressly excludes adjudicating political/legal research. Reopened Checking ledger; Repository assessment | **Retain the failures without unproved causal/occupant attribution.** Possible priming/runtime explanations are not established exculpatory causes. The repository review cannot decide the human case it excludes. Existing contradictions—one versus twelve identifiable rows; fourteen mutation rows versus narrower repairs—must remain visible as recorded, without rescanning calls. | Newly available omitted original audit artifacts, contemporaneous telemetry or a substantive correction resolving the exact discrepancy. No rescan, new model verdict or increased confidence demand. |

| **H52. Source-recovery and synthesis HOLDS** | "Hold by default"; publication barred while any load-bearing HOLD remains; rebuilt registers/paper also present | Aug. 17 red-marker/reconciliation → reconstructed registers → bounded institutional paper/Routes. The standalone review register and ZIP register share v0.2 naming but different IDs and dates. | **Do not use an obsolete absence of a register to block the recovered record.** A blanket gate can legitimately exclude unresolved load-bearing allegations from an unrestricted conclusion; it cannot prohibit a bounded synthesis of established findings. Distinct register histories must remain separate. | A genuinely newly available source that changes a specific row or authentic provenance correction. Another canonicalization/review of the same material is not a new evidentiary event. |

| **H53. Method rules that keep raising the bar** | Explicit higher-burden rule; permanent retirement; additional validation proposals | Architecture: "Every surviving explanation inherits a higher burden"; "Retirement is permanent"; elsewhere permits revision. Companion adds validation/independent-rater proposals. Architecture; Companion | **Reject automatic escalation of proof demands.** Apply the standard attached to the proposition and recorded stage. Method-development proposals cannot retroactively invalidate a document-supported act. Preserve permanent history, not permanently immune conclusions. No new tests follow. | Newly available evidence materially contradicting the finding, or a demonstrated defect in evidence it actually depends on. Mere survival, skepticism or lack of another reviewer is insufficient. |

| **H54. Repeated audits, research queues and symbolic tests** | Many copies, reconstructed summaries, recurring follow-up dates; some old findings repeatedly reopened | Filing packet, Quick Pull, ONE DROP and later register queues overlap; political validators acknowledge no

new independent witnesses; historical/myth/cast audits address different questions. |
Consolidate repeated obligations; preserve distinct corrections. Do not rerun the membership/hidden-command/casting question as a defense of the conduct case. Symbolic writing may remain symbolic without satisfying a criminal or scientific standard. No historical file is deleted or reclosed by this review. | A newly available substantive instrument that changes a named claim. Another duplicate audit, anniversary, recheck date, source-format change or reformulation does not qualify. |

Chronology and contradictions that must stay visible

These are changes in the retained record, not a silently reconciled replacement history. Where manuscripts share an August cutoff and exact authoring order is uncertain, the difference is described as a cross-document discrepancy.

| Retained sequence | What changed or conflicts | Consequence for the adversarial comparison |

|---|---|---|

| **31 July: Golden Dawn audit → Conduct docket** | Conduct explicitly changes the question from membership to conduct. The historical audit had not established modern affiliation; that was not a finding against the procurement/governance case. | No recurring affiliation gate belongs in a review of the documented human acts. |

| **31 July: Conduct → Indictments/Filing** | Strong TRUE BILL language coexists with missing appraisal, transaction minutes, data-use and accuracy records. The headline's "four true bills/three no bills" does not match the five numbered counts: I–III are affirmative, II qualified; IV–V are no bill. | Narrow unsupported executive assertions; do not let headline arithmetic substitute for count-level reasoning. |

| **Early Dialog wording → later political correction** | Future registration was described as actual shared-room access despite the recorded 3 July cancellation. Later packets separate network/registration from attendance. | Retain the original error and later correction; retain the network finding. |

| **Political investigation, PDF ordering** | It contains initial roster/asset passes, fuller packets, then revisions, but is not a simple forward chronological transcript. "No Blanche crypto found in this pass" coexists with a later developed crypto record. Acting/confirmed-office descriptions also change within the export. | A pass's failure to locate something is not evidence that it did not exist. Use the dated action and correction history rather than page order alone. |

| **Palantir: early broad data claim → later custody specificity** | Earlier formulations approach ingestion/consolidation as established. Later discovery/reporting strengthens actual custody while expressly withholding ELITE/arrest attribution. | This is both an upgrade and a narrowing. It does not support either "everything proved" or "nothing but speculation." |

| **Political packet's exact residual count → later register restriction** | Political p. 41 reports six ICE users; later register says no exact residual-copy/user count should be asserted from the controlled row. | Preserve the earlier reported number as history; use the narrower copy-control conclusion here. |

| ****17 August red-marker critique → adjudications/reconciliation**** | “Any twenty officials” would show equivalent overlap is asserted without a comparison; later responses reject requiring a base-rate study to establish discrete routes. The May TTS appointment correction is itself corrected to February, and Thiel's common founder link is restored. | The adversarial reviewer is also accountable for unsupported defenses and erroneous corrections. No new controls are required for existence claims. |

| ****Political crypto-income revision → reconstructed registers**** | Earlier prose combines AP and Reuters as a near-\$1.2B to over-\$1.4B range; later registers hold the canonical aggregate because categories differ. | Do not present either a single total or an uncertainty interval as reconciled. Large disclosed components still support the junction. |

| ****Older Blanche clearance HOLD → Coup §VI/note 13**** | Older record says the public legal basis and underlying instrument are unknown. Coup cites QFRs stating a theory and asserting a written determination. | “No legal theory identified” is stale; “actual determination independently reviewed” is still unsupported. Preserve both stages. |

| ****17–18 August register reconstruction**** |

`HUMAN\_SIDE\_SOURCE\_REGISTER\_v0.2\_review.md` uses its own source scheme and seven KL rows; the ZIP's `HUMAN\_SIDE\_SOURCE\_REGISTER\_v0.2.md` uses SRC IDs and eight U rows. | Same version number is not identity. The ZIP paper's citations belong to its companion register; do not silently redirect them to the standalone one. |

| ****Coup/Integrated executive syntheses versus methodological appendices**** | Broad conversion/single-system language coexists with unestablished formal Palace classification or individual cross-packet joins. | Preserve the synthesis as argument and the bounded factual findings as evidence; neither automatically upgrades the other. |

| ****14 July Wobble → 3 August ONE DROP → 17 August Wobble**** | ONE DROP carries July's six Active loops and strongest tail framing. August reduces Active loops to five and narrows multiple numerical/causal claims. August summary and detailed scenario do not describe the hold/hike gate identically. | Older snapshot remains dated. Keep both scenario formulations and the explicit September kill condition. |

| ****23-case executive explanation versus detailed limits**** | Plausible runtime/priming explanations are stronger in some conclusions than the available causal record allows; “not identified” becomes “empty.” | The same caution applied to accusatory attribution must apply to explanatory clearance. Keep failures established and cause unknown. |

Where humility has become an obstacle to a stable finding

The problem is not admitting uncertainty. It is allowing uncertainty about one proposition to prevent a conclusion about another. The recurring places are precise:

- ****Dependency → unlawful procurement:**** the alternatives analysis is still incomplete, but ICE's stated reliance on incumbent IP and switching difficulty is already evidence of dependency. Asking again whether procurement was illegal moves the target.
- ****Transfer/copy failure → person-level enforcement harm:**** ingestion and arrests are stronger claims. They cannot become prerequisites to acknowledging the narrower custody finding.

- **Conflict chronology** → intent or final adjudication: an adjudication is required to call something adjudicated. It is not required to describe the record, identify the conflict question, or contest an inadequately supported defense. This review does not itself pronounce a statutory violation.
- **Selection/access** → purchased or commanded decisions: friendship, lawful appointments and judicial independence address different propositions from benefits, omissions and selection machinery.
- **No primary original in this mirror** → no usable finding: source class should remain explicit. A supported secondary account does not become nothing because the original is unavailable; an interested denial does not become primary proof merely because an institution issued it.
- **No common command** → no structural accountability: the corpus expressly allows independently operating institutions to generate dependency and restricted correction. A common commander is not an element of that descriptive claim.
- **Source repair** → endless permission to synthesize: recovered records and a completed bounded paper defeat the continuing claim that no source-controlled synthesis is possible. A surviving stronger HOLD should restrict that assertion, not every other row.
- **Useful caution** → automatic higher burdens: the explicit instruction to increase the burden whenever an explanation survives has no stopping rule. Likewise, counting rejected hypotheses as validation rewards rejection rather than accuracy.
- **Personal right to remain unresolved** → institutional right to withhold an account: Tuesday expressly rejects that transfer. The critique is directed at the record custodian and controller, not at compelling the person to become a fully resolved profile.

The retained remedy is a bounded account: identify the act, source strength, responsible office, actual defense, unresolved extension and material evidence that could change it. A missing record does not establish guilt, but neither does it complete the institution's defense. It should not become an indefinite work queue for the person questioning the institution.

Duplicate work that can stop without deleting history

- **Exact duplicate artifacts:** the two research-index filenames contain the same extracted text; the two Integrated v4 files do likewise. Routes and the ZIP public draft have fully overlapping paragraph content. These are copies, not additional witnesses.
- **Canonical handoff** → red-marker → adjudications → two registers → institutional paper → Routes: preserve the corrections and differing schemas. Stop asking each summary to independently prove the same sourced fact. The red-marker review itself needs the corrections that followed it.
- **Filing Packet** → Quick Pull → ONE DROP → register request queues: many entries ask for the same charter, recusal, award, sharing or custody records. One issue may have several historical request formulations; that does not create several outstanding evidentiary failures. The Filing Packet has blank sent/acknowledged/response fields, so its existence does not prove submission or overdue agency production.

- **Golden Dawn/cast-map reviews:** preserve their bounded historical and literary conclusions. Repeating them supplies no defense of the governance, procurement, access or custody conduct.
- **Multiple model reviews:** the political packet itself says synthesis validators are not new evidentiary witnesses. Agreement does not multiply independent sources; disagreement does not automatically reopen an established row.
- **Wobble v2.3 and ONE DROP after v2.4:** retain the dated snapshots for correction history. Do not operate July's refresh queue alongside August's as though both were current requirements.
- **Checking's repeated mechanism/attribution passes:** retain completed sensitivities and contrary results. The human comparison uses the already retained behavioral findings, without commissioning another experiment or replay.

These are recommendations about redundant work, not renewed closure orders. The project's OPEN status and the withdrawal of the earlier operative closures remain intact.

Reading inventory

All files below were read as references. Source files were not edited. For exact duplicates, identical content was read once and the duplicate relationship recorded. PDF page references refer to physical PDF pages. The ZIP's members were read as retained documents, including its license and README.
